

XN 8.0.6 Presets & Tunings User Guide

Rev 1.0.4

Publication Date: 9th June 2026

XN 8.0.6 CONFIGURATION 1

OVERVIEW:

This guide explains how to download, extract and load the correct presets and tunings for the Atomik XN 8.0.6 mid-top loudspeakers. These settings are critical to ensure optimal performance and system protection.

Step 1: Download the Presets & Tunings ZIP File

1. Visit the XN 8.0.6 product page on the Atomik website.
2. Navigate to the Downloads section.
3. Locate and download the file:
Atomik XN 8.0.6 – Presets & Tunings.zip

Step 2: Extract the Files

1. Once downloaded, right-click the .zip file and select Extract All (Windows).
2. This will create a folder named:
Atomik XN 8.0.6 – Presets & Tunings

Step 3: Locate the Preset File

Inside the extracted folder, you'll find multiple preset files organized by configuration type.

- For example:

"C1-XN 8.0.6 P01.p24" for Configuration 1.

"C2-XN 8.0.6 P02.p24" for Configuration 2.

etc.

Refer to the "Configurations" guide found in the downloads section of the product page to determine which configuration matches your setup.

Step 4: Load the Preset

1. Connect the XN D24 DSP to your computer via USB.
2. Open the Atomik XN D24 software.
3. Import or load the selected preset file.
4. Verify that the routing, gain structure and limiter settings are correctly applied.

Important Notes

- Always ensure firmware and software are up to date.
- Do not modify EQ or limiter settings unless specified by Atomik support.
- Use only the matched preset for each loudspeaker model to prevent system damage.
